ABOUT ME

I am a software developer with 4 years+ experience building front end web applications, using my skills in HTML, CSS/SCSS, Tailwind CSS, JavaScript and Reactjs, i am able to create highly responsive interface for devices of various kinds. Among other things, i am also a back end developer with experience building Restful API's and CRUD database applications with flask and SQLAlchemy as an ORM in python, i am able to work with PostgreSQL database by using flask SQL alchemy as an object relational mapper to it. In my python developer road map, i have worked with python's selenium module for data scraping and building scripts for automated process on the web and i also build Desktop GUI applications to track business inventory systems.

WORK EXPERIENCE

Mark

Mid level | Backend web developer
Rivers State, Nigeria
2024-07-01 | Currently working here

In this project, i was given a task to create an API system that has endpoints for registering and logging/authenticating users to a PostgreSQL database. I used the python flask framework to create the API and for the database i was able to use flask's SQLAlchemy as an ORM to the postgresql database which was hosted on supabase platform. The database had models for users and Organisation. Whenever a user was registered successfully through the register endpoint, the user's details is created on the PostgreSQL, using Flask's sqlalchemy as an object relational mapper to it... The API also has other features for creating user organisations, getting the user's list of organisation and others.. For this project i used Json Web tokens for security and managing states in the API.. I was able to create this API successfully

I once collaborated with a figma designer to bring her figma designs to life using my skills in reactjs and tailwindcss, We were working given a task to create a website design that displayed list of static products on a website, the website consisted of four pages,the landing page, cart-page, check-out-page and the payment verified page. The website was responsive for devices which included ipads, tablets, mobiles and desktop. The experience was thrilling working with a figma designer to bring her design ideas of a website to life using my frontend development skills... Throughout the process, we communicated in real time suggesting different ideas we had for the project. We were able to create the website sucessfully and the project was considered a success.

Internship & Graduate | Frontend web developer
Rivers State , Nigeria
2024-01-01 | Currently working here

I use my knowledge of HTML, CSS/SCSS, tailwindcss, reactjs and javascript to created visually appealing frontend website interfaces for clients. I also specialise in making websites responsive and adaptive to screens of various devices which are Dekstop and mobile views. Other than that i use my knowledge of python to run scripts to perform web scraping process on the web or run automated processes too
